CONNECTIONS: The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risks associated with the use of this product. Crop injury, effectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of Seller. All such risks shall be assumed by the user or buyer. DISCLAIMER OF LIABILITIES: To the extent consistent with applicable law, Seller makes no other warranties, express or implied, of merchantability or of fitness for a particular purpose or otherwise, that extend beyond the statements made on this label. No agent of Seller is authorized to make any warranties beyond those contained herein or to modify the warranties contained therein. To the extent consistent with applicable law, Seller disclaims any liability whatsoever for special, incidental or consequential damages resulting from the use or handling of this product.

LIMITATIONS OF LIABILITY: To the extent consistent with applicable law, the exclusive remedy of the user or buyer for wastes, feed or pesticide storage or disposal. PESTICIDE STORAGE: Do not store this product above 104 oF or below 20 oF for extended periods of time. Keep container tightly closed in original container when not in use. Do not store exposed to ultraviolet light (sunlight) or moisture. Neem oil clouds and solidifies at temperatures below 59 oF. If oil has solidified, gently thaw by exposing to temperatures over 80oF. In such case, mix oil in container to prevent cross contamination with other pesticides, fertilizers, food and feed. Store in original container and out of the reach of children, preferably in a locked storage area. Keep container closed when not in use.

PESTICIDAL DISPOSAL: To avoid wastes, use all material in this container by application according to label directions. If wastes cannot be avoided, offer remaining product to a waste disposal facility or pesticide disposal program (often such Program Disposal: Non-refillable container. Do not reuse or refill this container. Offer for recycling, if available. 5-Gallon or Smaller Containers: When empty (or equivalent) provide after emptying. Triple rinse: Emptying the remaining contents into equipment application or a mix tank. Fill the container ⅓ full with water and recap. Shake the container thoroughly. Pour rinseate into application equipment or a mix tank or store rinseate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

IMPORTANT: READ BEFORE USE By using this product, user or buyer accepts the following Conditions, Disclaimer of Warranties and Limitations of Liability. CONDITIONS: The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risks associated with the use of this product. Biological Insecticide, Fungicide, Nematicide, Miticide

For use on listed crops including vegetables, fruits, citrus, nuts, ornamental plants, and other plants
For foliar and soil treatment to control listed insect pests, mites, fungal disease, and nematodes

READ ALL DIRECTIONS BEFORE USING THIS PRODUCT.

SHAKE WELL BEFORE USE.

DIRECTIONS FOR USE
It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. READ ENTIRE LABEL. USE STRICTLY IN ACCORDANCE WITH PRECAUTIONARY STATEMENTS AND DIRECTIONS, AND WITH APPLICABLE STATE AND FEDERAL REGULATIONS. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during product application. For any requirements specific to your state or tribe, consult the state or tribal agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS
Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard (WPS). Do not enter or allow entry into treated areas during the restricted entry interval (REI) of 4 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:

- Long-sleeved shirt and long pants
- Shoes plus socks

NON-AGRICULTURAL USE REQUIREMENTS
These requirements apply to uses of this product that are NOT within the scope of the WPS for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard (WPS). Do not enter or allow entry into treated areas during the restricted entry interval (REI) of 4 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:

- Long-sleeved shirt and long pants
- Shoes plus socks

PRODUCT MODE OF ACTION
TerraNeem® EC controls target pests by ingestion and by contact. The modes of action on insects are repellency, anti-feeding action and interference with the molting process.

TerraNeem® EC controls listed diseases by inhibiting mycelial growth.

GENERAL INFORMATION
Read all directions before using this product. To control listed pests, apply TerraNeem® EC as directed to any food or non-food crop up to and including the day of harvest. TerraNeem® EC controls listed diseases by inhibiting mycelial growth.

Insecticide & Miticide Foliar Applications: For most pest and crop conditions, use a concentration of 0.5 - 1% TerraNeem® EC. For heavier infestation, use a 1.5% concentration of TerraNeem® EC. Use a maximum rate of 5 pints TerraNeem® EC/acre.

Fungicide Foliar Application: Use a concentration of 1.0 - 1.5% TerraNeem® EC up to a maximum rate of 5 quarts TerraNeem® EC/acre.

Nematicide and Other Soil Applications: Use a maximum rate of 6 quarts TerraNeem® EC/acre in 1 - 2% dilution.

Refer to the Mixing and Application Instructions for mixing and rate instructions and to Use Site Section for a complete listing of crops.

MIXING INSTRUCTIONS
TerraNeem® EC is an emulsifiable concentrate and requires only water for the appropriate use dilution. Additional surfactant is not required. Shake the container well before use. Neem oil can solidify at temperatures below 59°F. If solidified, thaw the product by setting out in temperatures over 80°F and agitating well before mixing with water. For optimal emulsion, do not use cold water (less than 45°F).

KEEP OUT OF REACH OF CHILDREN
CAUTION
EPA Reg. No. 88760-5

agriculture@terramera.com

Active Ingredient:
Cold Pressed Neem Oil.................... 84.9%
Other Ingredients.................................. 15.1%
Total........................................... 100%

This product contains 6.52lbs of cold pressed neem oil per gallon.

Add TerraNeem® EC to a mixing tank half-filled with water of 45°F or warmer and agitate. Then add additional water to final volume with continuous agitation. If water temperature is below 45°F, achieve a good emulsion by premixing TerraNeem® EC at 1:1 ratio with tepid water before filling to final volume. When mixing with other products such as wettable powder insecticides or fungicides, add those products first when the tank is approximately 1/3 full. Agitate well while mixing to achieve complete emulsification. Do not use if a uniform, cloudy emulsion is not formed. Always use this product promptly after mixing with water. To prevent separation of the emulsion, agitate continuously during application. Non-uniform dilution can cause crop injury or result in lowered effectiveness. For tank mixtures, add components to the tank containing the TerraNeem® EC spray mixture and agitate thoroughly. Do not let tank mixture sit for an extended period of time. If tank mixture is allowed to sit, agitate thoroughly again prior to and during application. Adjusting the spray mixture pH between 5.5 and 7.0 will provide optimal performance.

Tank Mix and Compatibility
TerraNeem® EC is best applied independently but has been found to be compatible when tank mixed with liquid fertilizer such as fish emulsion and adjutants such as cocoamid oil, sesame oil and castor oil. To determine the physical compatibility of TerraNeem® EC with other products, test as described below before mixing.

Jar Compatibility Test: Using a quart jar, add the proportionate amounts of products to be tank mixed to 1 quart of water in the following order. Add wettable powders and water-dispersible granular products first, then add liquid flowables, then add emulsifiable concentrates and solutions last. After thoroughly mixing by agitation, let stand for at least 5 minutes. If the combination remains mixed or can be remixed readily, it is physically compatible. Once compatibility has been proven, use the same procedure for adding additional ingredients to the spray tank. All possible tank mixes on all crops have not been tested. Growers must test tank mix combinations for phytotoxicity on a sample of plants prior to use. Do not use mixtures of incompatible products as it may cause phytotoxicity or result in lowered effectiveness.

Always read and follow the directions for use, precautions and limitations for use on all product labels used in combination. Applications must follow the precautions and limitations of the most restrictive product label in the mixture. Do not exceed the dosage rates of any product. Check compatibility by using the correct proportion of the products in a small test container.

DO NOT apply sulfur or sulfur containing products within 14 days of a TerraNeem® EC application.

Phototoxicity
When used according to label instructions, TerraNeem® EC has been evaluated for phototoxicity on a wide range of crops and ornamentals. To avoid plant damage, test this product on a small portion of the area to be treated for phototoxicity before treating the entire area. Apply foliar spray in conditions that favor fast drying.

All possible mixtures of pesticide sprays, other fertilizers, surfactants, and adjuvants, have not been tested. Therefore, user must test spray mixtures to ensure no phytotoxicity before applying to wide areas.

Application Equipment:
Apply TerraNeem® EC using any powered or manual pesticide application equipment including high volume, low volume, ultra-low volume, electrostatic, air blast and fogging equipment. When used as a foliar application, ensure complete coverage of the plant surfaces, but avoid pooling or run off. Follow the original equipment manufacturer’s instructions. Avoid spraying under conditions of high humidity and high temperature (>90°F). Thoroughly clean spray equipment used to apply TerraNeem® EC before use. Tank mixed combinations of TerraNeem® EC may not be compatible with oil-based formulations. To determine compatibility, conduct Jar Compatibility Test.
CHEMIGATION INSTRUCTIONS

thorough coverage of plant surfaces.

between -2°C and 5 °C (28-48 °F) during shipping and until planting.

minutes. Remove the plants from the treatment solution, shake off excess liquid, and drain for

Apply as a soil treatment to control listed soil-borne pests and larvae of pests (see

to control listed insect pests, nematodes and diseases.

Apply as a soil treatment to control listed soil-borne pests and larvae of pests (see

is most effective when applied before or around the onset of insects, mites or their eggs (see Pest List) or as soon as they are noticed.

Apply at a concentration of 0.5 - 1.5% for a maximum rate of 5 pints TerraNeem EC per acre. Ensure that both the top and bottom of leaves are wetted. For optimum results, repeat the applications at intervals of 7-10 days. Use higher rates and increase spray frequency when pest pressure is high. Spray early in the morning or in the evening for best results. Repeat application if it rains within four hours of spraying.

Nematicide and Other Soil Use

Apply as a preventative treatment (see Pest List for Soil Pests) or control treatment after nematodes and other listed pests have been detected. When used as a soil application (soil drench, in-furrow, drip-applied), apply at 1.0 - 2.0% for a maximum rate of 6 quarts TerraNeem EC per acre to deliver complete and thorough coverage. When applied as a soil drench, avoid excessive run off. Repeat the applications as necessary.

Root-dip Nematicide Use on Strawberries

For bare-root dip applications on strawberries use a concentration of 2% (e.g. 2 gallons of TerraNeem EC in 100 gallons of water). If bare-root nursery plants are in cold storage, allow them to thaw to ambient temperature – approximately 20°C (70 °F). Submerge the entire plant to be treated in TerraNeem EC emulsion. Leave the plant completely submerged in for 15-30 minutes. Remove the plants from the treatment solution, shake off excess liquid, and drain for 5-15 min. Plant after treatment, or package the plants in suitable containers and store cold between -2°C and 5 °C (28-48 °F) during shipping and until planting.

Funigical Fungicide Use

Apply TerraNeem EC in sufficient amount of water and with adequate spray pressure to achieve thorough coverage of plant surfaces. TerraNeem EC is most effective when applied before the onset of disease development. Apply a maximum rate of 5 quarts TerraNeem EC per acre at a concentration of 1.0 - 1.5%. Do not apply with any sulfur or sulfur containing products within 14 days of a TerraNeem EC application.

APPLICATION INSTRUCTIONS

Apply TerraNeem EC as a foliar spray or as soil treatment (soil drench, in-furrow, drip-applied) to control listed insect pests, nematodes and diseases.

Apply as a soil treatment to control listed soil-borne pests and larvae of pests (see Chemigation Instructions).

Insecticide/Miticide Foliar Use

Apply TerraNeem EC in sufficient amounts of water and adequate spray pressure to achieve thorough coverage of plant surfaces. TerraNeem EC is most effective when applied before or around the onset of insects, mites or their eggs (see Pest List) or as soon as they are noticed.

Apply at a concentration of 0.5 - 1.5% for a maximum rate of 5 pints TerraNeem EC per acre. Ensure that both the top and bottom of leaves are wetted. For optimum results, repeat the applications at intervals of 7-10 days. Use higher rates and increase spray frequency when pest pressure is high. Spray early in the morning or in the evening for best results. Repeat application if it rains within four hours of spraying.

Fungicide Fungicide Use

Apply TerraNeem EC in sufficient amount of water and with adequate spray pressure to achieve thorough coverage of plant surfaces. TerraNeem EC is most effective when applied before the onset of disease development. Apply a maximum rate of 5 quarts TerraNeem EC per acre at a concentration of 1.0 - 1.5%. Do not apply with any sulfur or sulfur containing products within 14 days of a TerraNeem EC application.

CHEMIGATION INSTRUCTIONS

General Chemigation Requirements

Apply this product only through in-furrow or drip (trickle) irrigation & system(s). Do not apply this product through any other type of irrigation system. Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water. If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts. Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place. A person knowledgeable of the chemigation system and responsible for its operation or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Furrow Chemigation Requirements

Systems using a gravity flow pesticide dispensing system must meter the pesticide into the water at the head of the field and downstream of a hydraulic discontinuity such as a drop structure or weir box to decrease potential for water source contamination from back flow if water flow stops. Systems utilizing a pressurized water and pesticide injection system must meet the following requirements:

- The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from back flow.
- The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
- The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
- The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
- The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
- Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

A supply tank is recommended for this product. If using a supply tank, dilute this product at the rate of 6 quarts per 100–200 gallons of water. Frequent agitation is necessary. Apply in the second half of the water application to deliver TerraNeem EC to the soil pests.

Drip Chemigation Requirements

The system must contain a functional check valve, vacuum relief valve and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from back flow. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump. The pesticide injection pump must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down. The system must contain functional inter-locking controls to automatically shut off the pesticide injection pump when the water pump motor stops. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected. Systems must use a metering pump such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

A supply tank is recommended for this product. If using a supply tank, dilute this product at the rate of 6 quarts per 100–200 gallons of water. Frequent agitation is necessary. Apply in the second half of the water application to deliver TerraNeem EC to the soil pests.

USE SITES

Crop Uses – Use TerraNeem EC on the following crops adn crop groupings:

VEGETABLES

Bulb Vegetable Crops (including but not limited to)

Garlic

Onion

Leek

Shallots

Cucurbit Crops (including but not limited to)

Casaba

Squash (summer)

Chayote (fruit)

cantaloupe, crenshaw melon, cucumber

Cucumber

Chinese waxgourd

golden psenheim melon, honeydew melon, honey balls, mango melon, Persian melon, pineapple melon

Gherkin

Gourd, edible (Chinese okra)

Squash, winter

Moringa oleifera (balsam apple, balsam pear, bitter pear, bitter melon)

Pumpkin

Watermelon (incl. hybrids)

Fruiting Vegetable Crops (including but not limited to)

Eggplant

Pepino

Groundcherry

Tomatillo

Pepper (bell pepper, chili pepper, cooking pepper, pimento, sweet pepper)

Leafy & Brassica (Cole) Vegetable Crops (including but not limited to)

Anchovy

Celtuce

Broccoli

Celtuce

Broccoli raab

Chervil

Brussel sprouts

Chrysanthemum

Chinese broccoli (Gai lon)

Cilantro

Cabbage (head, leaf)

Collards

Cassava (bitter, sweet)

Corn salad

Celery

Cress

Chinese cabbage

Dandelion

(Bok choy, napa)

Endive

Chinese spinach

Fennel

(amaranth, Tampala)

Greens

Cauliflower
